

Instant Application 09/614,937

Claim 1 (Currently Amended): A method of displaying a web page to a user, comprising the steps of:

providing a portable triggering device having a unique code stored therein;

extracting the unique code from the triggering device with an activation system when the portable triggering device is proximate to the activation system, the activation system disposed on a network and physically separate from the triggering device;

retrieving location information associated with the unique code from a database, the location information corresponding to a location of the web page on a remote location disposed on the network;

in response to retrieving the location information, automatically connecting the activation system to the remote location; and

presenting the web page corresponding to the location information of the remote location to the user via the activation system.

Claim 2 (Original): The method of Claim 1, wherein the triggering device in the step of providing is a portable wireless transponder.

Claim 3 (Original): The method of Claim 2, wherein the passive transponder has the unique code stored therein in a non-volatile memory.

Claim 4 (Original): The method of Claim 1, wherein the unique code in the step of providing is uniquely associated with the web page.

Claim 5 (Original): The method of Claim 1, wherein the triggering device further includes a unique transponder identification code stored therein, the unique transponder identification code being

Compending Application 09/659,520

1. (Currently Amended): A method of displaying a web page to a user, comprising the steps of:

providing a triggering device having a unique code associated therewith that uniquely identifies the triggering device, the unique code associated with a remote location on a network of the source of the web page and the unique code having no location information contained therein;

transmitting the unique code from the triggering device to an interface system, the interface system disposed on the network at a triggering location;

retrieving location information associated with the unique code from a database, the location information corresponding to the location of the web page at the remote location on the network;

in response to retrieving the location information, connecting the interface system to the remote location; and

presenting the web page corresponding to the location information of the remote location to the user via the interface system.

2. (Original): The method of Claim 1, wherein the triggering device in the step of providing is a portable wireless transponder.

3. (Original): The method of Claim 2, wherein the transponder has the unique code stored therein in a non-volatile memory.

4. (Original): The method of Claim 1, wherein the unique code in the step of providing is uniquely associated with the web page.

5. (Original): The method of Claim 1, wherein the interface system in the step of

<p>Claim 19 (Previously Presented): An apparatus for displaying a web page to a user, comprising: a portable triggering device of a user having a unique code stored therein; and an activation system disposed on a network for extracting said unique code from said triggering device when said portable triggering device is proximate to said activation system, said activation system physically separate from said triggering device; wherein location information associated with said unique code is retrieved from a database, said location information corresponding to a location of the web page on a remote location disposed on said network; wherein in response to said location information being retrieved from said database, said activation system is automatically connected to said remote location; wherein the corresponding web page of said remote location is presented to the user via said activation system</p> <p>Claim 20 (Original): The apparatus of Claim 19, wherein said triggering device is a portable wireless passive transponder.</p> <p>Claim 21 (Original): The apparatus of Claim 20, wherein said passive transponder has said unique code stored therein in a non-volatile memory.</p> <p>Claim 22 (Original): The apparatus of Claim 19, wherein said unique code is uniquely associated with the web page.</p> <p>Claim 23 (Original): The apparatus of Claim 19, wherein said triggering device further includes a unique transponder identification code stored therein, said unique transponder identification code being exclusively associated with said triggering device.</p> <p>Claim 24 (Original): The apparatus of Claim 19, wherein said activation system comprises a transmitter and a receiver each operatively connected to a computer, said transmitter for activating said triggering device with an activating signal, and said receiver for receiving a triggering signal having said unique code contained therein.</p>	<p>14. (Currently Amended): An apparatus for displaying a web page to a user, comprising: a triggering device having a unique code associated therewith that uniquely identifies the triggering device; and an interface system disposed on a network and operable to receive said unique code transmitted from said triggering device; wherein said unique code is used to retrieve associated location information from a database, said location information corresponding to a location of the web page on a remote location disposed on said network <u>the unique code having no location information contained therein</u>; wherein said interface system connects to said remote location in response to said location information being retrieved from said database; wherein the web page corresponding to the said location information of said remote location is presented to the user via said interface system.</p> <p>15. (Original): The apparatus of Claim 14, wherein said triggering device is a portable wireless transponder.</p> <p>16. (Original): The apparatus of Claim 15, wherein said transponder has said unique code stored therein in a non-volatile memory.</p> <p>17. (Original): The apparatus of Claim 14, wherein said unique code is uniquely associated with the web page.</p> <p>18. (Original): The apparatus of Claim 14, wherein said interface system comprises a receiver which is operatively connected to a computer, said receiver for receiving a triggering signal having said unique code contained therein.</p> <p>19. (Original): The apparatus of Claim 14, wherein the user manually enables said triggering device to transmit said unique code.</p>
